The Recipe App

By Sergey, Ricky & Brandt

Elevator Pitch

Wouldn't you love somewhere to be able to store all your favorite recipes? Free from the burden of having around outdated and fading cookbooks and personal recipe cards scribbled on index cards. Subscribe now before Christmas and get a discount of 1-year for $99, after Christmas it will be €99!!! Subscribe now and save.

Concept

- ## User Story
  - Most of us have at one point and time had a recipe for something that was scribbled down on whatever was handy and within arms reach at that time. We wanted somewhere safe to input that recipe to avoid wasting time searching for it, decipher it, and trying to replicate it for ourselves.

- ## Motivation for development?
  - We wanted an app that easy to use, and different from other web apps

- ## Description
  - The Recipe App is a great resource to help get new recipe ideas, share recipes, and add recipes that will satisfy not only your belly but get you out of the dark ages and have these recipes at the tip of your finger. No more searching through old cookbooks or rummaging around trying to find grandmas super secret recipe that's written on an index card.

Process

- Technologies used
    - Axios - help with API calls
    - Bcryptjs - encrypt user passwords
    - CSS - styling for the app
    - Express - for framework
    - Handlebars - create our HTML
    - JavaScript - functionality
    - Mysql - database for our users
    - Passport - authenticate users
    - Sequelize - manage database
- Breakdown of tasks and roles
    - Front End - Sergey, Ricky, Brandt
    - Back End - Sergey, Ricky, Brandt
- Challenges
    - Sequelize routes and handlebars
- Successes
    - Project Deployed and works as expected

Demo

Directions for Future Development

1. Embed videos from youtube that will play and show the process of making the recipe
2. Adding a share button to share recipes through email, text messages, facebook, etc...
